

SAMARA SECURITY

Post Production Facility

Samara utilizes the security protocols of the facility in which it is installed.

The Samara Ompa-E4kP is a “send only” only device. It is not bi-directional.

Samara sends only a video broadcast, no recorded files. All client media remains in the secure confines of the facility hosting it.

Once the broadcast is stopped, there is nothing to view—anywhere.

Viewers

Samara authorization temporarily captures the following end-user data for users accessing any given stream

- Name
- Email address
- IP address
- GPS location
- Session duration
